

Application of Phillip A. Swanson

TITLE OF THE INVENTION

INLINE WATER FILTER

ABSTRACT OF THE DISCLOSURE

An inline water filter includes flexible inlet and outlet connecting tubes and an intermediate filter body joined together by a pair of dual-diameter connecting fittings defining a flow passageway therethrough. Filter
5 media is disposed within the filter body and within enlarged sections of the fittings. The connecting tubes are held onto the barbed fittings by ferrules crimped thereover and have connectors at their free ends for attachment to a fluid source and a fluid delivery point.
